

STATUS Healthcare Hub brings together doctors, patients and medical service providers centered on the medical records, historical data and collaboration for better health.

Integrating mobile personal devices with the backend equipment data in a secure information workplace has never been so easy.

DATASHEET

STATUS for Patients

- Store and share its medical information in a secure place.
- Gives feedback to let health service providers know what to improve.
- Improved medication adherence with mobile apps and tracking.
- Monitors health parameters and checks their evolution over time

STATUS for Doctors

- Add photos, video and voice recording to patient files using mobile devices.
- Promote expertise and interests to larger audience.
- Receives feedback from your patients in real time.
- Review patient medical records, online and via mobile, when needed.

STATUS for Health Service Providers

- Keeps patients engaged and always close even if they are not in the clinic.
- Promotes your doctors to attract more customers.
- Unlocks the clinical and business value of medical data.
- Improves clinical data access where and when it is needed, from any mobile device.

Hitachi Data Systems and Star Storage Share a Vision that Addresses Real-World Challenges of Healthcare

You need a top healthcare application for access to patient files and history, one that puts together data not only from healthcare providers but also from patients and doctors. STATUS Healthcare Hub meets these needs.

You must have a secured unstructured content storage infrastructure. Hitachi Data Systems, a successful leader in storage technology and the world's only vertically integrated storage company answers that challenge with Hitachi Content Platform.

You have to stay focused on delivering a healthcare vision where all data is:

- Stored based on standards and without proprietary lock down.
- Available for collaboration; access to data is enabled, regardless of application.
- Intelligently presented in relevant context.

HDS and Star Storage provide the solution.

STATUS Healthcare Hub leverages Hitachi Content Platform as a massively scalable, multitenant distributed object store solution in order to:

- Deliver advanced storage and data management capabilities, including “write once, read many” (WORM), single instancing and compression.
- Offer protection, preservation and life-cycle management for compliance demands, internal controls records management and legal need.
- Provide enhanced search capabilities.
- Support rapid growth of unstructured data.
- Ensure scalability to control costs, support thousands of customers in one system, and improve operational efficiency.

USAGE SCENARIOS:

- **As a doctor**, you experience many instances in which you need to quickly save information about your patient while you are consulting. By using the mobile companions of STATUS Healthcare Hub, you can take pictures, make audio recordings, or create movies of your patient examination in real time. These records are available anytime.
- **As a health service provider**, you need to provide your customer with laboratory test results, medical reports, imaging analysis data and so on. With STATUS Healthcare Hub you get a secure channel to manage all interactions with your patient and also expand your services in new territories.
- **As a patient**, you need a reliable place, always available online and always connected with you through mobile devices, to define and track your health, medication, appointments and therefore increase your confidence.

Joint Solution Functionalities

- Manage patient medical profile.
- Create a virtual file to store all medical records of a patient.
- View a timeline of medical events in patient’s life.
- Monitor healthcare parameters and see a chart of their evolution.
- Track and maintain a history of patient medication;
- Enable doctors to investigate through entire family medical history of patient for a better diagnostics.
- Track and manage patient appointments.
- Reduce patient wait times and service feedback.

Why Connect to the Hub?

- Gathers medical data from different information systems and displays them to patients and doctors in a friendly manner.
- Delivers a secured space for collaboration and sharing of medical data for patients and doctors.
- Provides an easy way to complete a patient’s virtual medical file with data from: medical equipment, HIS (Hospital Information System), CIS (Clinical Information System), health service providers, doctors, and patients.
- Enables investigation of a family’s medical history for better and more precise diagnosis.
- Assists doctors in diagnostic process by providing a more complete medical profile of the patient in the case.
- Allows the community of patients to share reviews and details about doctors and the quality of medical services received.
