Healthcare Hub and Patient Engagement

Redefining the way healthcare providers work, collaborate on medical records and connect to their patients

status-online.com

Integrated with Skype for Business for Zero distance Healthcare

Delivered from:

Microsoft Azure

A modern healthcare solution that addresses real-world challenges.

STATUS is a solution for electronic medical records management and patient engagement, offering a better way to enable doctors and other medical services provider's staff to interact with patients in a secure and friendly environment.

01.

POSITIONING

Doctors and patients hub

Redefining the way healthcare providers work, collaborate on medical records and connect to their patients.

Electronic Medical Records governance and long-term preservation

A safe and secure location for storing medical data with excellent capabilities for long-term medical information storage (retentions, digital shredding).

Patient - centric healthcare

Quick and user friendly access to patients medical files and history, including family history components, both for patients and doctors.

Digital healthcare

Designed to help your healthcare business to be successful in a changing digital healthcare world, to treat more patients, get reimbursed faster and stay ahead of change.

Connected healthcare

Patients are able to get lab results, medical images, visit records and prescription history from a growing list of health applications, imaging and labs devices and pharmacies apps.

Mobile healthcare, from Cloud

Powerful cloud-based technologies, on-premise installation option and world-class services built to scale - on your desktop, tablet, and smartphone.

02.

CUSTOMER NEEDS

As a Patient you need a reliable place, always available online and always connected with you through mobile devices, to access your health status and define and track your medication.

As a Health Service Provider you need to provide your patients with laboratory test results, medical reports, imaging analysis data, etc. Also you need to provide claims related information to the Insurer.

As a Health Insurance Company you need to provide your customers with accurate information about their medical claims, customized insurance package based on their medical history and to quickly process claims from health service providers for fast reimbursement.

As a Doctor you need quick and user friendly access to patients health information, that will enable you to record information about your patient while you are consulting.

03.

PRODUCT ARCHITECTURE

Unify, store and empower secured collaboration on medical information.

Bring together doctors, patients and medical services providers centered on medical records, historical data and collaboration for better healthcare services.

01.

KEY
DIFFERENTIATORS

Hitachi Content Platform Certified

Deeply integrated, leveraging HCP key features (eg. data protection, metadata, retention, multi-tenancy and namespaces).

Great User Interface for different roles, Ready to Use Out of the Box

Due to uniquely flexible data management features, it can ingest, archive, and use any document, with any classification, from day 1 after the out-of-the-box installation.

Configurable, easy to adjust to any client needs

Because every healthcare client is unique, STATUS has a modular, flexible design that it allows it easily fit to any client needs with minimum implementation time and without coding.

Competitive Pricing

Competitive pricing vs. traditional EMR platforms.

Open to Integration

Management Interoperability Services (CMIS) and therefore content managed is accessible in non-proprietary format from any system (existing HIS / CIS / EMR / etc.) or mobile device.

Designed for the Mobile-First world

By using open standards such as Content Management Interoperability Services (CMIS) the content managed is accessible in non-proprietary format from any mobile device. Based on own mobile application for iOS and Android the users have the ability to easily view content using a variety of devices such as laptops, tablets, and mobile phones.

Cloud-Ready

Designed for Cloud and SaaS providers with multi-tenancy capabilities.

Included document scanning with OCR

Embedded powerful document scanning (StarCapture Desktop) with unlimited OCR and automatic learning for healthcare paper records ingestion.

Included fast thumbnail viewer for medical records

View PDFs, scanned images, medical documents directly from the user interface. Web based and optimized for viewing large images.

Included document scanning with OCR

Embedded powerful document scanning (StarCapture Desktop) with unlimited OCR and automatic learning for healthcare paper records ingestion

Included fast thumbnail viewer for medical records

View PDFs, scanned images, medical documents directly from the user interface. Web based and optimized for viewing large images;

Electronic Medical Records Collections

Ability to define specific set of healthcare information based on specific needs (sharing with family and friends, asking for a 2nd opinion) with advanced sharing capabilities (inside and outside the organization) while keeping healthcare information governance & control (the content doesn't leave the repository, time-boxed access).

**Store, share, access
medical files**

Parameters & Perspectives

01.

FOR HEALTHCARE
PROVIDERS
AND INSURANCE
COMPANIES

Information Governance and Long-term Preservation

- Complete patient history and medical profile;
- Storing and organizing data from different sources (medical equipment, healthcare applications; etc.), with enhanced capabilities of data mining and statistics achievement;
- Centralized enterprise-wide management of any type of clinical data;
- Long-term preservation, automation of retention and compliance policies ensuring legal, regulatory and industry compliance; enforce retention rules based on a records retention schedule, record-holds and enforced disposition if needed.

Medical Information Security

- Safe and secure location for storing medical data – WORM storage, encryption;
- Secure access to the patient's medical information and the possibility to set access permissions for physicians, family members, specialized healthcare providers for second opinion;
- Advanced but secured sharing capabilities outside the company walls while still keeping control on data – the data is not moved from the original location;
- Open standards that enhance the interoperability of various departments and institutions.

02.

FOR DOCTORS AND
PATIENTS

Connected & Enhanced Healthcare

- Secured but easy to use environment for patient – doctor collaboration and share of medical information.
- Quality insights on medical data to support decision process based on consistent information.
- Recording medication and control of its administration by alerts and notifications (smartphone app, e-mail etc.).
- Monitoring the level of patient's medical parameters and graphical display of the values evolution over time.

STATUS BENEFITS!

Easy access from any mobile device

Patients focused

- Quick and user friendly access to patients files and history, including family history components, both for patients and doctors.
- Selection of appropriate physicians for a first or second opinion at the patient’s request, who can also see their profile and rating.
- Patient feedback for medical services.
- Web App and Mobile clients for iOS and Android.

03.

FOR NATIONAL HEALTHCARE MANAGEMENT

- An easy way to collect and centralized patients data; a complete electronic medical record for the citizens;
- Full history of documents and medical events for enrolled patients
- Medication schemes and recurrence (recipes, treatment monitoring);
- Patient engagement & community integration - proactive care of population rather than individuals.
- Population Health Management - maximize insight into patient treatment & factors that influence health & outcomes.

04.

FOR YOUR BUSINESS

- Better and faster medical decisions** - Deliver clinical efficiency and ease-up the decision process with a positive impact over the quality of patient care;
- Significantly improve doctor-patient interaction** - Professional and user friendly way to interact with patients using an integrated application centered on patient virtual medical file;
- Permanently connected, engaged and healthier patients** - Doctors, healthcare service providers and health insurance companies are now connected in real time, sharing information, offering second opinions and delivering better medical services, even without patient’s presence;
- Unlock the clinical and business value of medical data** - Designed to help your healthcare business to be successful in a changing digital healthcare world, to treat more patients, get reimbursed faster and stay ahead of change;
- Hassle-free Electronic Medical Records governance** - A safe and secure location for storing medical data with excellent capabilities for long-term medical information storage (retention, digital shredding).
