SEAL Content Library Services for SAP brings together the extensive information archiving functionalities of SEAL Unified Records Management system, based on Hitachi Content Platform (HCP) and the power of SAP. Like never before, you can reduce your SAP footprint, cut costs, gain smarter utilization of IT resources and ensure leaner systems, while boosting SAP archive usage from a powerful yet simple interface that your line of business users will enjoy.

DATASHEET

SEAL Content Library Services for SAP

We know that your business strives for performance every day and that your SAP system is a roaring engine that engorges huge amount of information. Inevitably, increasing SAP database footprint and pressure over resource consumption and administration deteriorates your business engine performance.

That's why we developed a simple way for you to free up SAP storage space, improve response time, system availability and solve performance issues caused by large volumes of database tables or old transactions data.

Unleash the full potential of your SAP engine with a solution that empowers you to:

- Archive SAP data files (ADK files) from any SAP business suite application;
- Archive SAP business documents and associated metadata (business objects attributes for each archived/linked document);
- Archive SAP Print Lists to reduce SAP footprint while cutting cost;
- Enable SAP users to easily access and display from SAP user interface documents that are now stored in SEAL repository extending and boosting the value of standard SAP data archiving;
- Enable non-SAP users to access, view and share documents directly from SEAL user interface for improved user experience.

Major benefits starting from day one:

- Free up SAP storage space, improve response time, system availability and solve performance issues.
- Stay in control of SAP data growth while reducing the TCO of your SAP system.
- Gain smarter utilization of IT resources and leaner systems.
- Reduce the pressure over the IT personnel with faster backup & recovery windows and smoother SAP upgrade deployments.

- Affordable licenses, fast implementation and lower maintenance costs.
- Ensure compliance and reduce company exposure.
- Long-term SAP data archiving processes. SEAL on top of HCP storage platform empowers automation and more complete and secure data archiving and storage processes.
- Significantly improve user experience. Enable line of business users, without

the help of specialized IT personnel, to easily apply retention policies, to control disposal, maintaining document lifecycle governance.

- Reduce your SAP footprint while focusing on your business and not on technology with zero CAPEX, pay per use and headache-free operations.
- Facilitates data reuse at a later time, with SEAL advanced or simple search and retrieve features.

Real world challenges:

- SAP database typically increases by 5% to 10% with each SAP software release;
- Legislative and legal requirements urge SAP Administrators to protect the data and make it available for later retrieval;
- 90% of SAP users are experiencing monthly performance problems;
- 70% of SAP customers worldwide have no idea how big their database is or its growth rate.
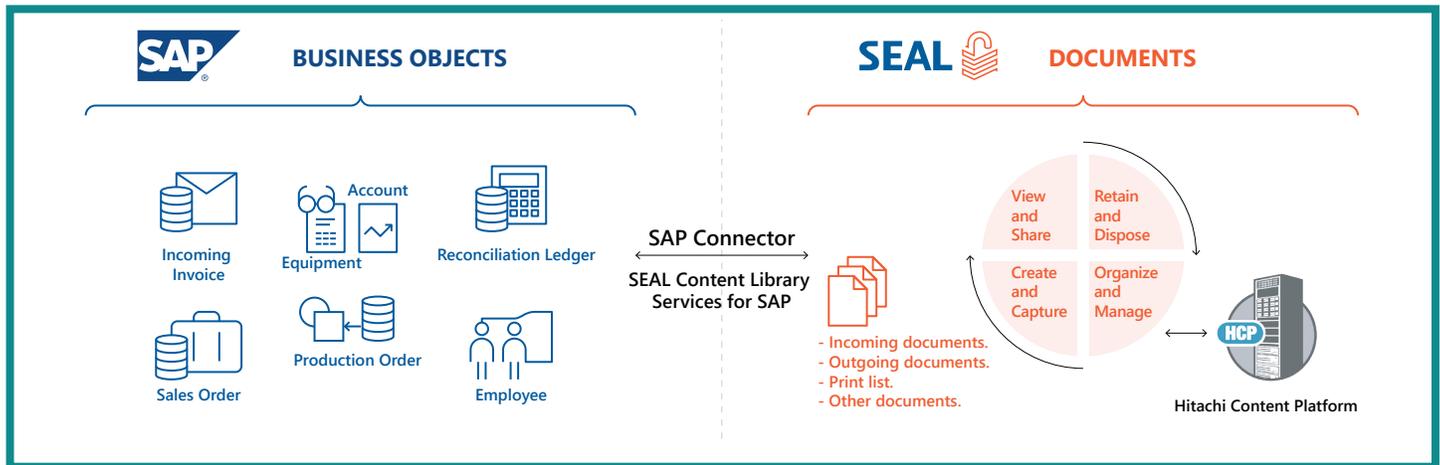

What is SEAL?

SEAL is a unified enterprise archiving platform that stores unstructured content and related metadata in a single, consolidated repository. Leveraging Hitachi Content Platform SEAL for HCP enables you to protect, reuse and securely share your electronic records while maintaining compliance, reducing company exposure and mitigate risks!

SAP Integration – Business architecture

- SEAL provides a secure and scalable Universal Content Repository (based on HCP) with powerful but simple user interface for non-IT or business users.
- The solution SEAL delivers the SAP connector using SAP standard technologies (HTTP Content Server and SAP Java Connector).

To get into SEAL additional information regarding the ADK file, SEAL has an automatic synchronization job that processes all the new content and interrogates SAP to get metadata for that content. This job can be scheduled or run on demand. After this job is finished, SEAL will automatically classify the content as a SAP archive file and additional metadata like number of archived objects and archive session id will be available for search.

Boost the value of standard SAP data archiving!

Leveraging a seamless process to access data that is archived from SAP your company will unleash the full set of benefits offered by SEAL Enterprise Information Archiving and HCP:

- Flexible browsing perspectives to reach the business content just the way users think about it (no more fixed files and folders hierarchies).
- Advanced and simple document search and retrieval features.
- Individual or bulk content download/export (based on security permissions).
- Metadata driven search templates and subscriptions.
- Get instant access to archived information within your business context.
- Store, share, synchronize, protect, preserve, analyze and retrieve file data in a single system.

With a scalable architecture based on a state-of-the-art storage platform, Hitachi Content Platform, SEAL is the perfect solution for storing and securely managing your entire electronic archive! Discover all the advantages of Hitachi Content Platform and SEAL working together.
